

# Understanding and working with default bridge network

## 1 List out default networks on host

```
$ docker network ls
```

## 2 Run a container in daemon mode

```
$ docker run -id --name busybox-1  
busybox
```

## 3 Inspect busybox container

```
$ docker inspect busybox-1
```

## 4 Inspect bridge network

```
$ docker network inspect bridge
```

5

## Ping the container from Docker host

```
$ ping 172.17.0.2
```

# Replace the IP address with your container's IP address

6

## Ping the container from remote host

```
$ ping 172.17.0.2
```

# Replace the IP address with your container's IP address
