

Building Docker Images using BuildKit

1 Set DOCKER_BUILDKIT env.

```
$ DOCKER_BUILDKIT=1 docker build -t  
nginx-buildkit .
```

2 List out Docker images on host

```
$ docker image ls
```

3 Build image without image cache.

```
$ DOCKER_BUILDKIT=1 docker build --  
progress=plain --no-cache .
```

4 List out Docker images on host

```
$ docker image ls
```

5 Set BuildKit as default image builder

```
$ sudo su -  
  
nano /etc/docker/daemon.json  
  
{  
  "features":  
    {  
      "buildkit": true  
    }  
}  
  
# Save and exit the daemon.json file
```

6 Restart Docker Service

```
$ systemctl restart docker  
  
$ systemctl status docker
```

7 Build Docker Image

```
$ docker build -t nginx-buildtest .
```
