Cleaning up Docker Images

1 List out Docker images on host

```
$ docker image ls
```

2 Remove nginx-tarball image

```
$ docker rmi nginx-tarball
```

3 List out Docker images on host

```
$ docker image ls
```

4 Delete multiple images at once

```
$ docker rmi ceruleanhub/nginx:v1
<target_imageID> nginx-stdin
```

5   Force removal of a Docker image

```
$ docker rmi <target-imageID> --force
```

6   List out all images (with intermediate image layers)

```
$ docker images -a
```

7   Remove all unused images

```
$ docker image prune
```

8   List out Docker images on host

```
$ docker image ls
```

Cerulean Canvas

9   Remove every single image!

```
$ docker rmi $(docker images -a -q) --force
```

10   List out Docker images on host

```
$ docker image ls
```

Cerulean Canvas
